tix.

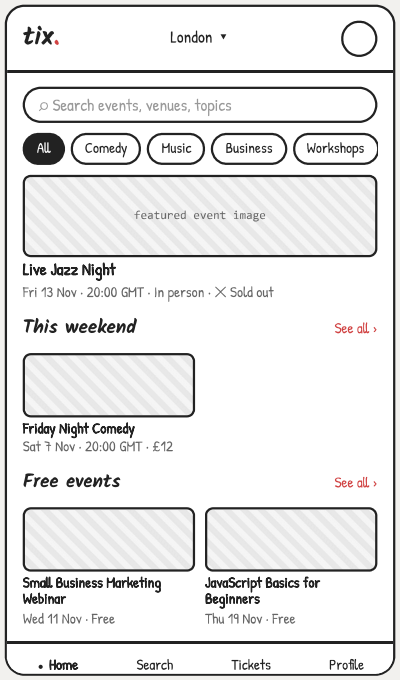

# Wireframes v2

Low-fi screens for an event and ticket booking web app: comedy, music, business, workshops and online sessions. Mobile first at 390 px, desktop at 1440 px for Home, Event detail and the Organiser dashboard.

Red notes under each screen: behaviour and accessibility.

# A Browse

### 1a · Home

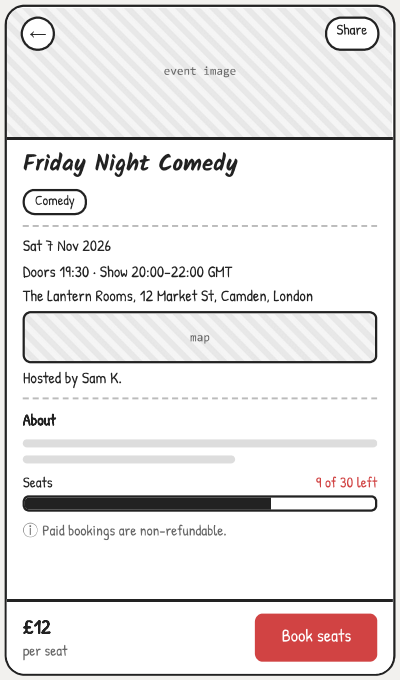

Chips are toggle buttons (aria-pressed) and scroll sideways. Every card links to event detail; times always show the timezone.

### 1b · Search & filter

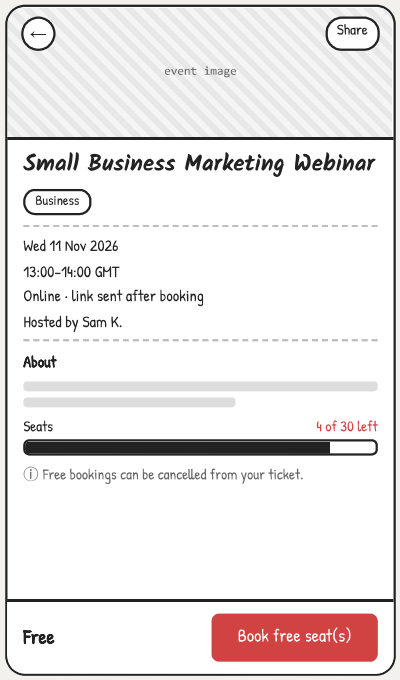

Debounced search; older requests are cancelled. Filters live in the URL so results can be shared. Result count is announced.

### 1c · Event detail (paid, in person)

Sticky bar stays in view. Logged out → 1d-login. Address is real text; the map is extra.

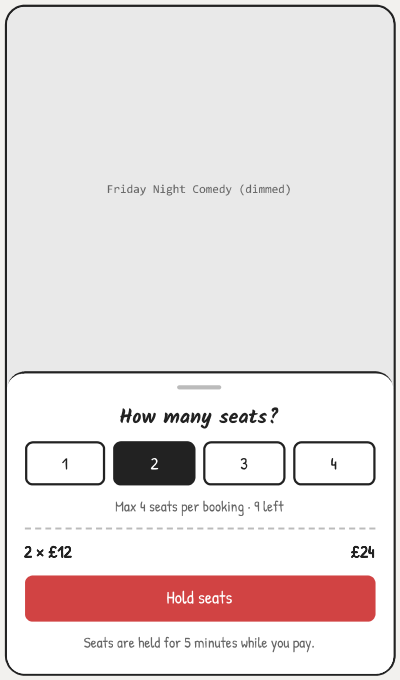

### 1c-free · Event detail (free, online)

Same layout as 1c. No hold, no payment. The meeting link only appears on the ticket.

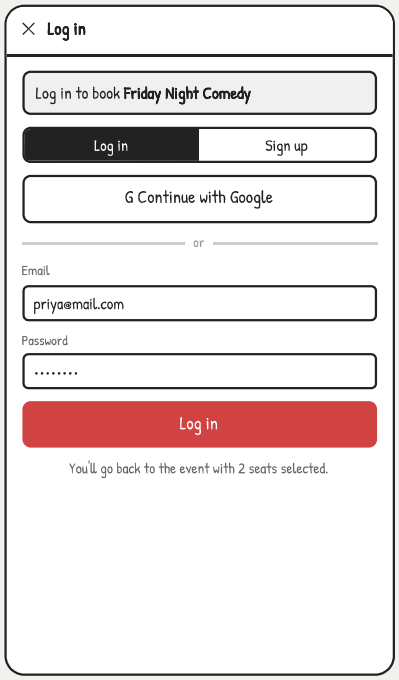

# B Booking (paid): seats and payment

**1d** · Seat count sheet

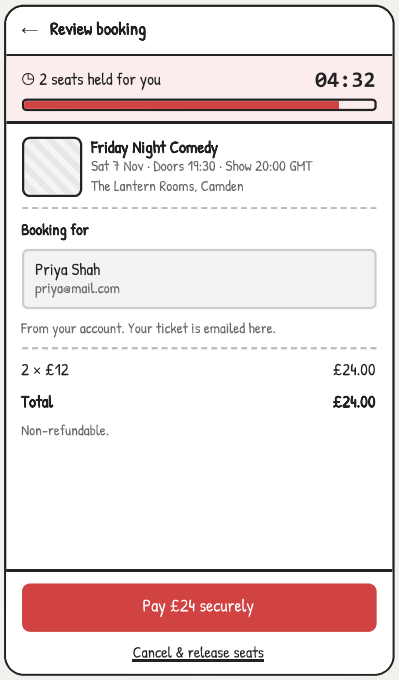

Radio group (fieldset + legend); arrow keys move. Options above seats-left are disabled. Hold sends an idempotency key.

**1d-login** · Log in to book

Event URL and seat count are kept in the redirect (?next=…&seats=2). Sign up returns to the event too.

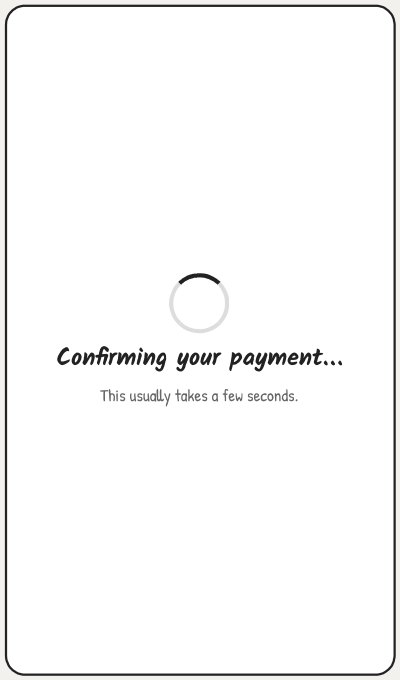

**1e** · Review & pay

Countdown uses the server expiry time. aria-live (polite) at 2 min, 1 min, 30 s only. Pay → Stripe hosted Checkout.

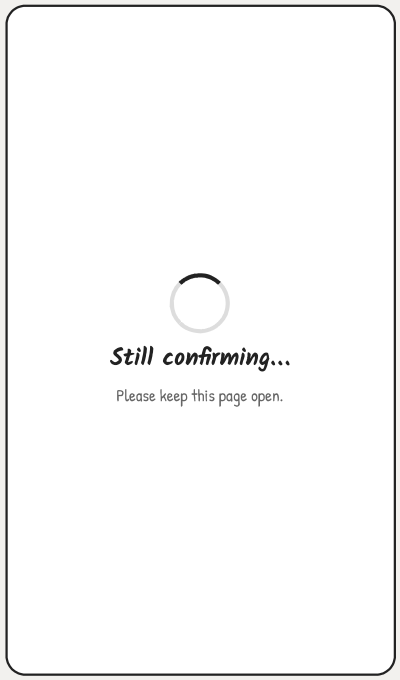

# B Booking (paid): confirming payment

**1f (i)** · Confirming · 0–10 s

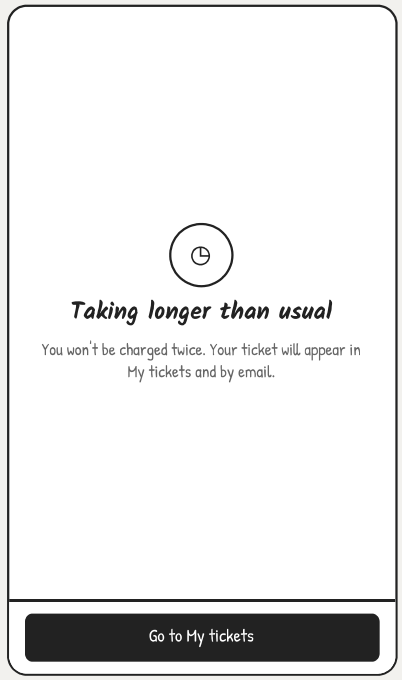

Stripe redirects here. The page polls booking status; only the webhook confirms, never the redirect.

**1f (ii)** · Confirming · after 10 s

Text change announced politely (aria-live). The spinner always has a text label.

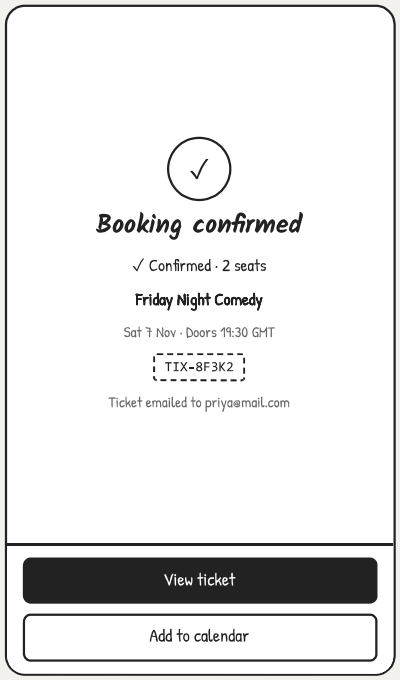

**1f (iii)** · Confirming · after 60 s

Polling stops. When the webhook lands the ticket is emailed and listed in My tickets.

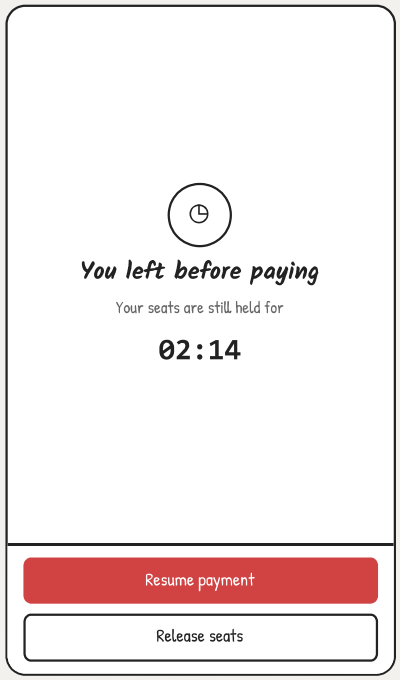

# B Booking (paid): outcomes

**1g** · Booking confirmed

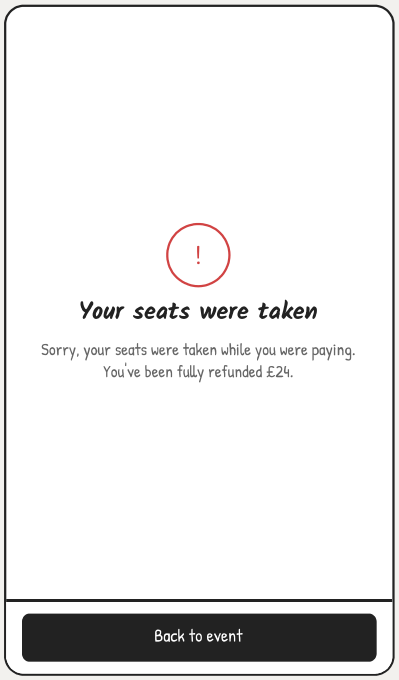

Shown only once the server says Confirmed. Focus moves to the heading on load.

**1h** · Checkout cancelled

Stripe's cancel URL lands here. Resume reopens Checkout while the hold lasts; at 0:00 → 2c.

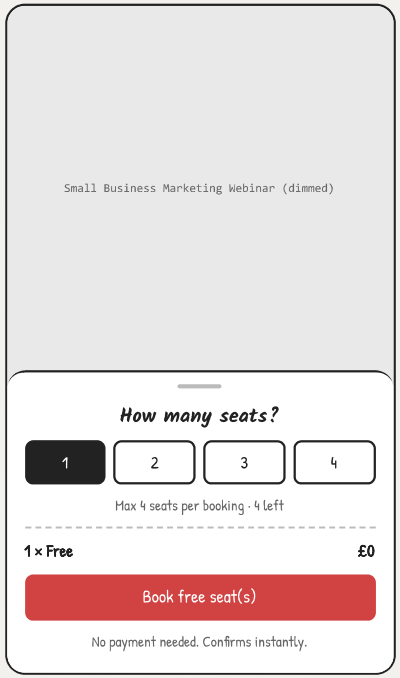

**1h-refund** · Seats lost after payment

Payment arrived after the hold expired and no seats were free. The webhook refunds automatically and emails the attendee.

# B2 Booking (free)

**1d-free** · Free seat count sheet

One DB transaction + idempotency key: a double tap creates one booking. Skips 1e and Stripe → 1g.

Free booking flow

**1c-free** · Event detail

↓

**1d-free** · Seat count

↓

**1g** · Booking confirmed

No hold, no Stripe, no countdown.

# C Tickets

**1i** · Ticket (in person)

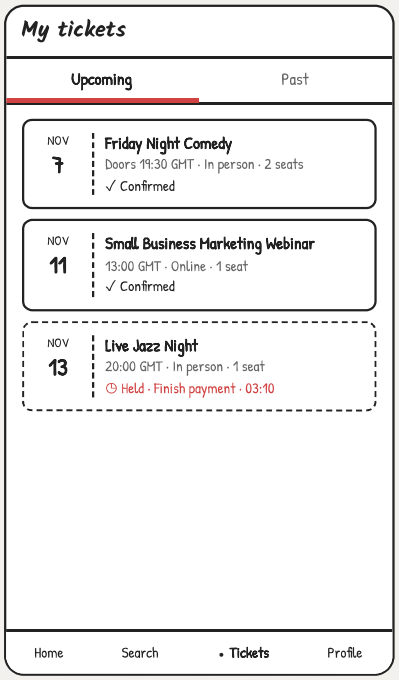

QR encodes the booking ref, also shown as text for door staff. Directions open the maps app.

**1i-online** · Ticket (online, free)

Join link activates 15 min before start. Cancel is for free bookings only and asks to confirm first.

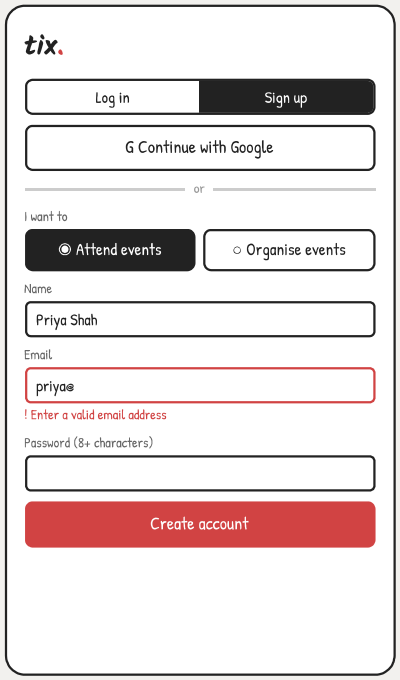

**1j** · My tickets

Held card shows its countdown and links back to 1e. Status is always icon + text.

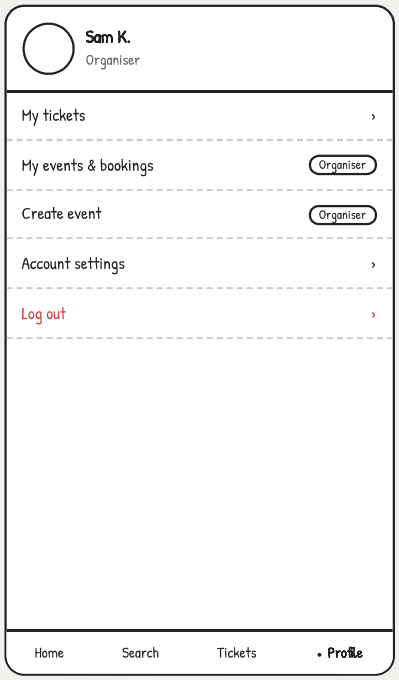

# C Account

## 1k · Log in / Sign up

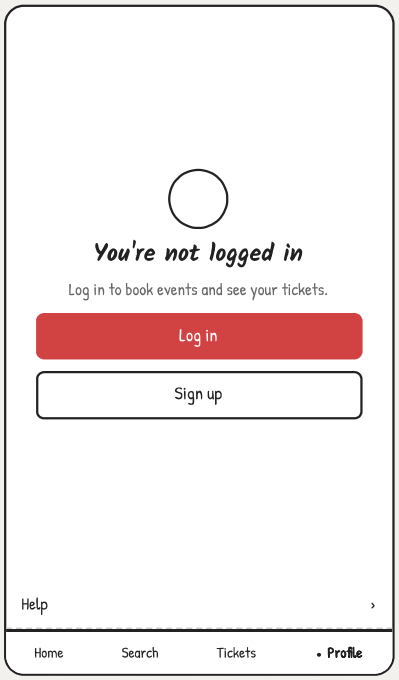

Role is chosen here. On submit, focus moves to the first invalid field; errors linked with aria-describedby.

## 1l · Profile (organiser)

Items tagged Organiser only show for that role. Attendees see My tickets, Account settings, Log out.

## 1l-out · Profile (logged out)

Logged-out state. Tapping Tickets or Book also leads to Log in.

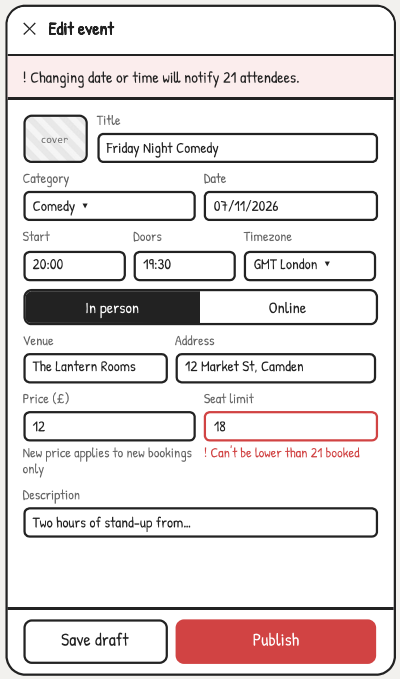

# Organiser

### 1m · My events

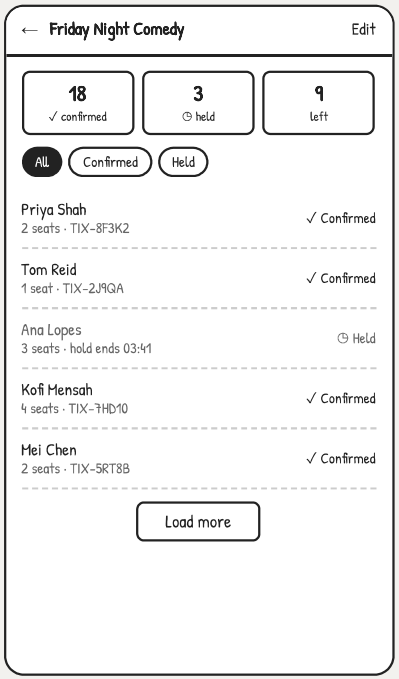

Bar: solid = confirmed, hatched = held, always with the numbers as text. Tap a card → 1o.

### 1n · Edit event (has bookings)

Seat limit can't go below booked (18 confirmed + 3 held). No Delete when bookings exist. Doors only for In person.

### 1o · Event bookings

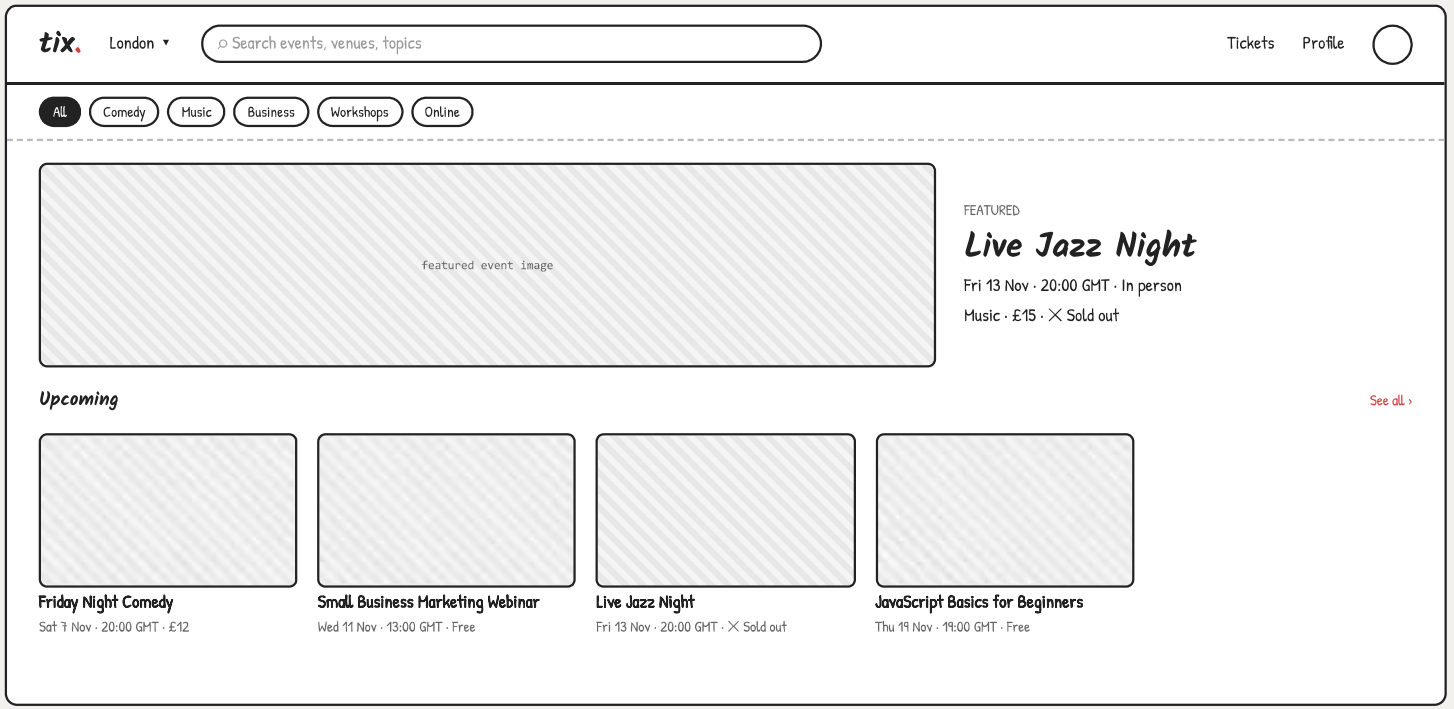

Filter is a radio group. Held rows show when the hold ends and drop off if it expires.

E

# Desktop: Home

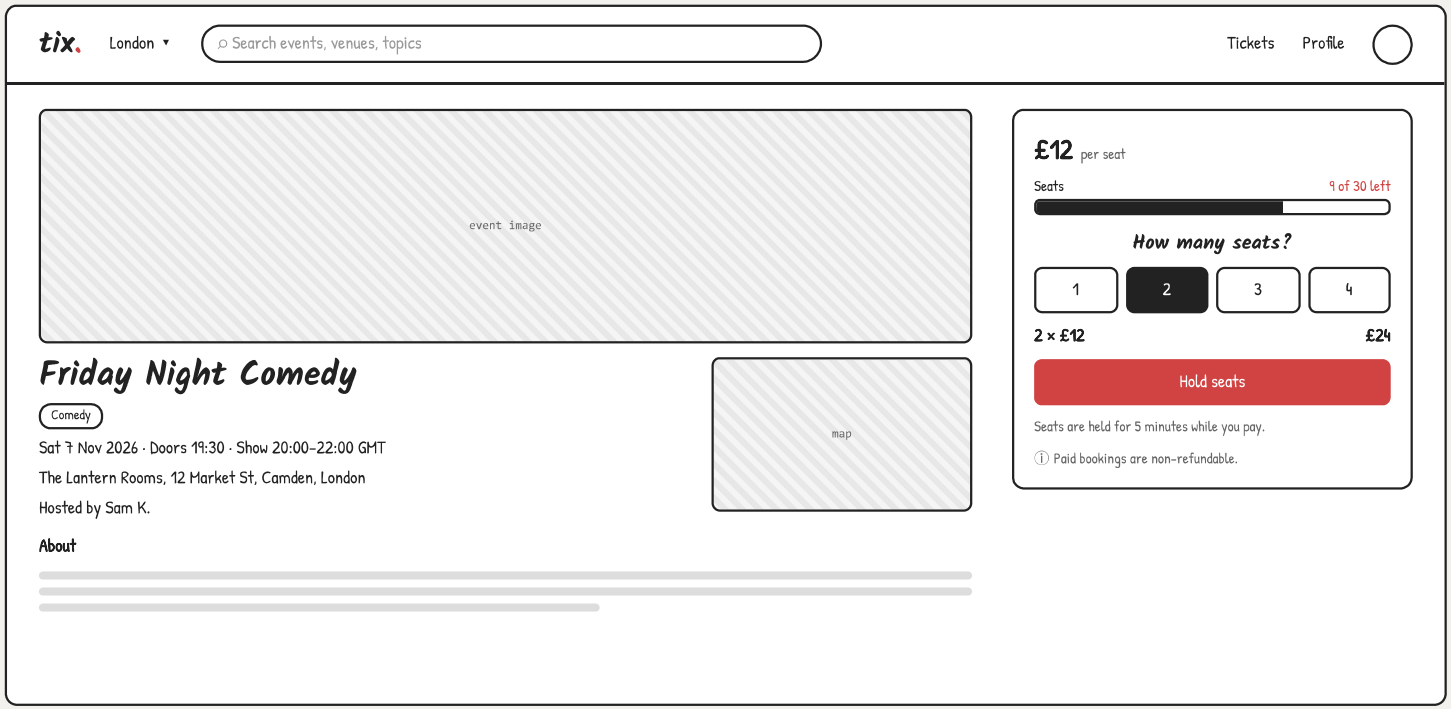

**1a-desktop** · Home

Header nav replaces the bottom nav; rows become a 5-column grid. A skip link to main content is the first tab stop.

# E Desktop: Event detail

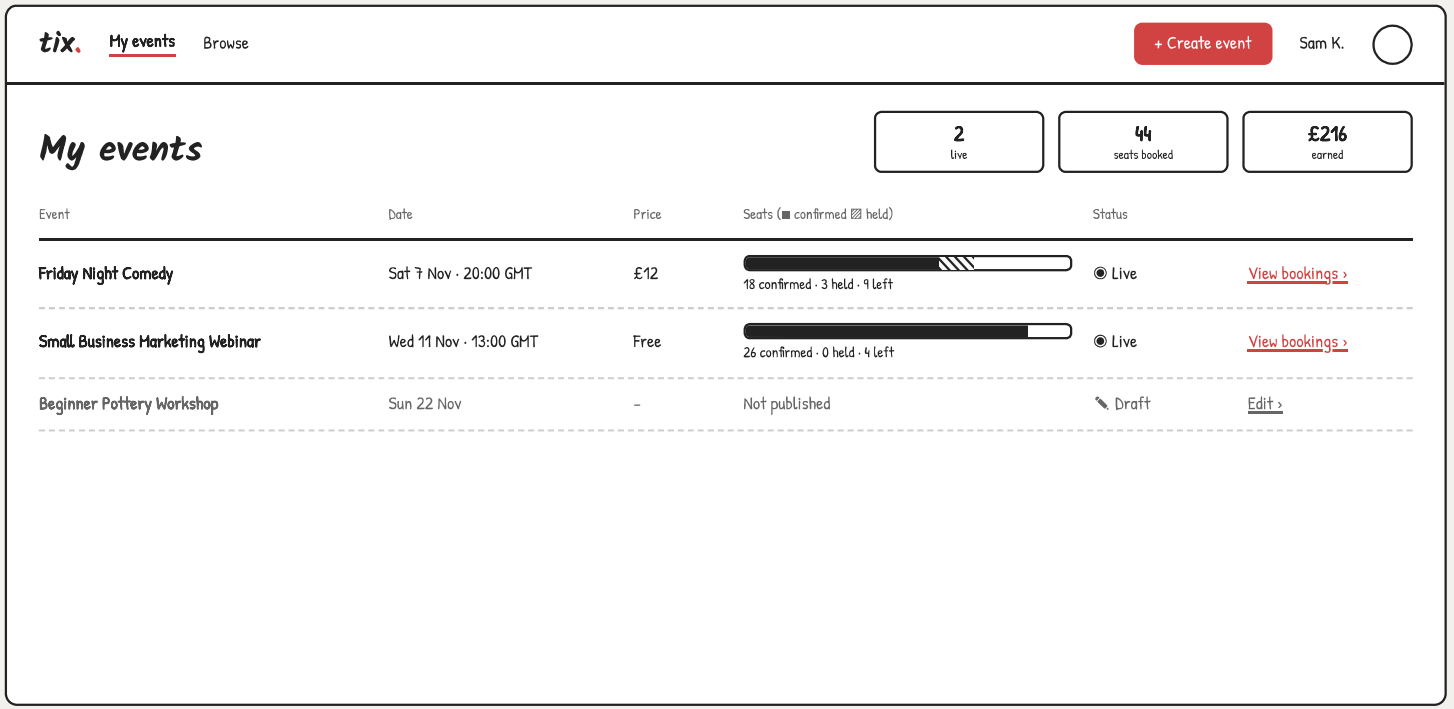

**1c-desktop** · Event detail

Sticky booking box (position: sticky) replaces the mobile bottom sheet: same radio-group seat picker and rules.

# E Desktop: Organiser dashboard

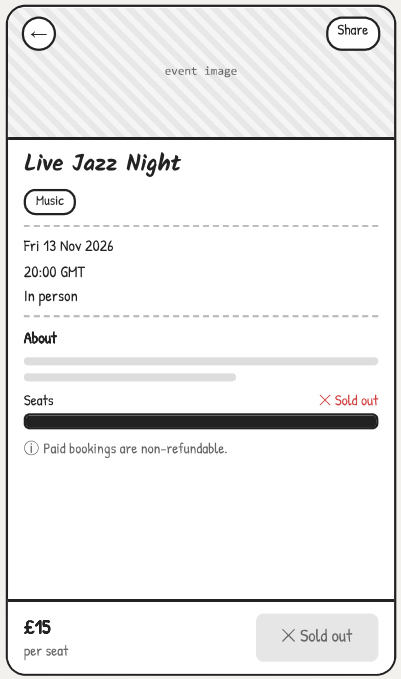

**1m-desktop** · Organiser dashboard

A real table with column headers. Same bar + text as 1m. Row → 1o bookings; draft → 1n.

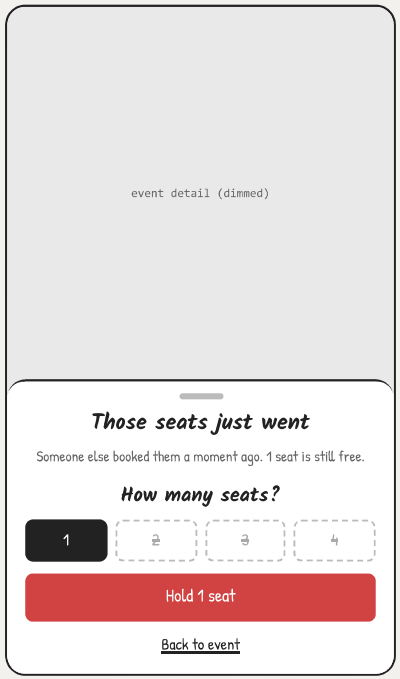

# F Edge states (1 of 2)

**2a** · Sold out

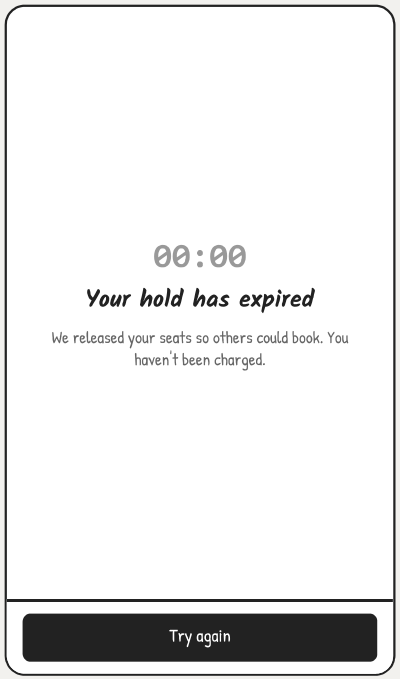

Button disabled and says Sold out in text. No waitlist in v1 (see G).

**2b** · Someone got the last seats

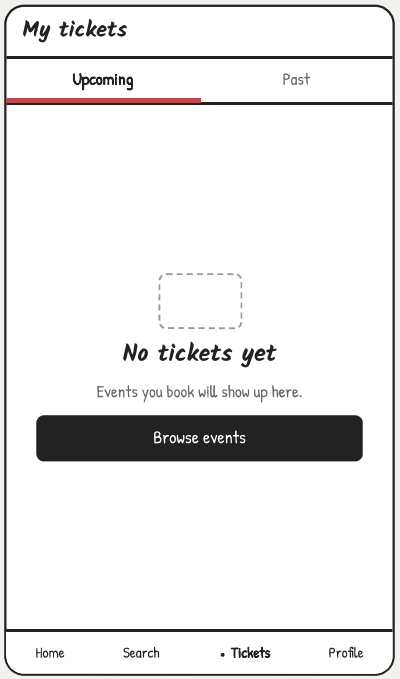

Server returns 409. Picker refreshes with live seats-left, so 2–4 are disabled. Message uses role=alert.

**2c** · Hold expired

Shown when the countdown hits 0:00 or the server reports expired. Focus moves to the heading.

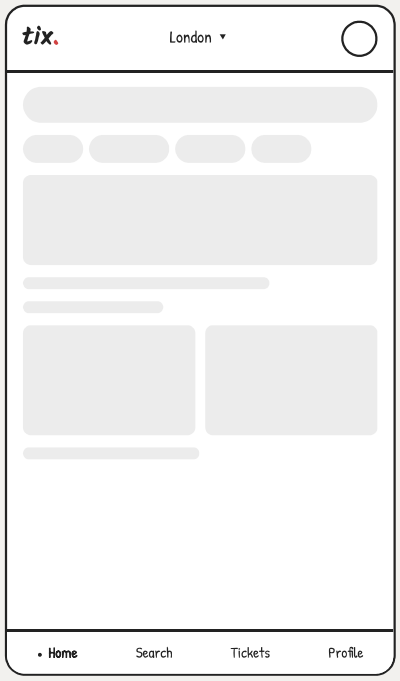

**2d** · Empty My tickets

Empty state per tab. Past tab says "No past events yet".

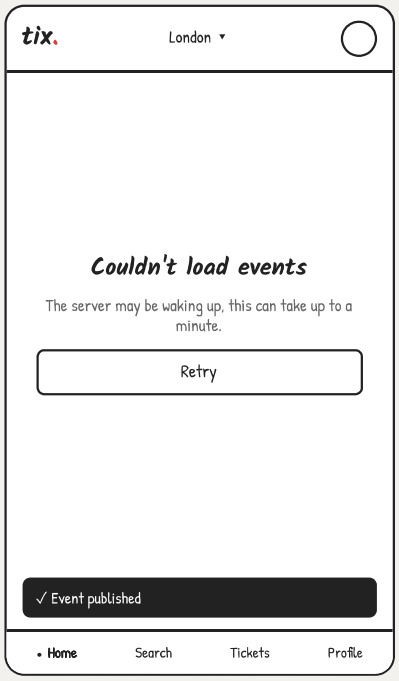

# F Edge states (2 of 2)

## 2e · Loading skeleton

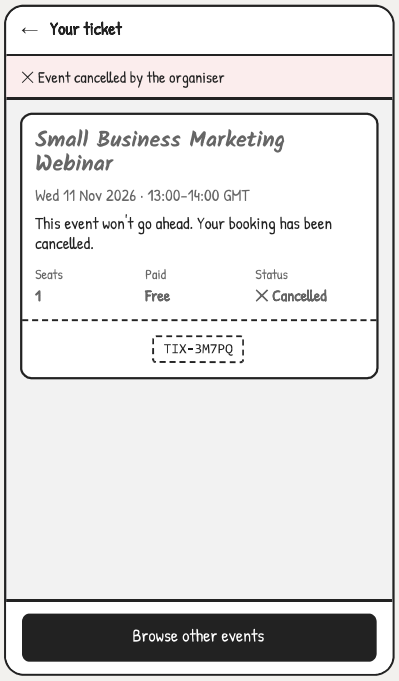

Skeleton matches the real layout so nothing jumps (CLS). The list has aria-busy=true while loading.

## 2f · Error + success toast

Free API host sleeps when idle. Toasts sit in a role=status region and hide after 5 s.

## 2g · Event cancelled (ticket)

Status shows ✕ Cancelled as text and an email is sent. Paid cancel-and-refund comes later (G).

## G Later (not in version 1)

01 Waitlist / notify me when a seat frees up

02 Email all attendees

03 Paid refunds and cancellations

04 Organiser cancel-and-refund event

05 Venue seat maps (choosing a specific seat)
